PROFESSIONAL SUMMARY

Results-driven QA Engineer with 4 years of experience across web, mobile, and API testing for enterprise fintech platforms. Builds and maintains test automation frameworks with **Selenium WebDriver** (Java) and **Cucumber BDD**; track record includes **reducing production defects by 35%** and increasing regression coverage by 45%. Experienced across the full **SDLC/STLC** in **Agile/Scrum** delivery, with **API testing (Postman/Newman)**, **performance testing (JMeter)**, **SQL/database** validation.

TECHNICAL SKILLS

- **Automation Testing:** Selenium WebDriver, Cucumber BDD, Appium, TestNG, JUnit, Page Object Model (POM); Playwright (JavaScript - Learning/Hands-on)
- **Manual Testing:** Functional, Regression, Integration, Smoke, Sanity, Exploratory, UAT, Database, Mobile, Cross-browser, Shift-left Testing
- **API Testing:** Postman, Newman, REST API Testing & Validation
- **Performance & Load Testing:** Apache JMeter
- **CI/CD & Tools:** Jenkins, Git, Jira, Redmine, Chrome DevTools, Burp Suite
- **Programming & Databases:** Java, Python, SQL, HTML, CSS
- **AI & Productivity:** ChatGPT, Claude, Gemini, GitHub Copilot — AI-assisted test design, test data generation, and defect analysis

PROFESSIONAL EXPERIENCE

QA Engineer

Sep 2022 – Present

DataSoft System Bangladesh Limited — Dhaka, Bangladesh

- Designed, developed, and maintained test automation frameworks using Selenium WebDriver, Java, Cucumber BDD, JUnit/TestNG, and Page Object Model (POM) for enterprise fintech applications.
- Performed functional, regression, integration, smoke, sanity, and cross-browser testing, plus mobile and web application testing for functionality, usability, and cross-device compatibility.
- Designed and executed test cases, test plans, and test strategies aligned with STLC and defect lifecycle management processes.
- Conducted API testing using Postman/Newman, SQL validation, and request/response analysis.
- Executed performance testing using JMeter and basic security testing using Burp Suite.
- Participated in requirement analysis, sprint planning, UAT, release validation, and QA sign-off in Agile/Scrum SDLC, collaborating closely with Product and Engineering teams.
- Leveraged AI tools (ChatGPT, Claude, GitHub Copilot) for test case generation, synthetic data creation, automation scripting, and defect analysis.
- Mentored junior QA engineers and drove automation adoption within the QA team.

KEY ACHIEVEMENTS

- Reduced production defects by 35% through improved test coverage and automation.
- Increased regression test coverage by 45% across web and mobile platforms.
- Awarded “Star Player” (2024) for outstanding QA performance and contribution to product quality.
- Built DataShift, cutting data migration effort from 80 hours to 7 hours per branch (90%+ reduction), saving significant operational time.

KEY PROJECTS

Microfin360 Next — *Enterprise Microfinance Platform | 350+ MFIs*

- Performed end-to-end functional, regression, and integration testing for a large-scale fintech platform.
- Built automated regression test suites using Selenium, Cucumber, and Java.
- Validated APIs, database transactions, security aspects, and critical financial workflows to ensure system accuracy and reliability.
- Collaborated with cross-functional teams to define QA strategies and maintain release quality.

DataShift — *Data Migration Automation Tool | Self-Initiated | Spring Boot, Java, Selenium & Python*

- Designed and developed a data migration automation system with Spring Boot backend, HTML/CSS/JavaScript frontend, and Selenium-based automation.
- Developed Python scripts for data preprocessing, transformation, and migration data validation.
- Reduced migration effort by 90% — from 80 hours to 7 hours per branch — improving accuracy and deployment efficiency.

EDUCATION

BSc in Computer Science and Engineering

Jan 2018 – Feb 2022

Green University of Bangladesh, Dhaka

SOFT SKILLS

- **Leadership:** Mentored junior QA engineers and drove automation adoption within the team
- **Ownership:** Self-initiated and built DataShift end-to-end, cutting migration time by 90%+
- **Problem-Solving:** Identified coverage gaps that led to a 35% drop in production defects
- **Collaboration:** Partnered with Product, Engineering, and Business stakeholders across Agile delivery cycles
